***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The first sentence of the specification was changed to read as follows:

--This is a division of Serial No. 10/083,234, filed February 26, 2002 and now U.S. Patent Number 6,629,294.--

***Reasons For Allowance***

The following is an examiner's statement of reasons for allowance: the claims are allowable because the prior art of record fails to show or suggest the use of a cam member pivoted to the elongate brake bar of a stretcher brake system combined with a cam follower mounted on the wheeled carriage, as is set forth in paragraphs 6 and 7 of claim 6. The closest single reference found in the prior art is the cited patent to Hanson et al (US 6,264,006) which shows a brake system used upon the wheeled carriage of a stretcher or gurney. The brake system is generally similar to the one disclosed and claimed, and includes a longitudinal pedal actuated rotatable shaft 50 that operates a linkage formed by links 86, 87. A brake bar formed by transverse bar 89 is attached to a cross member of the wheeled carriage, and includes ring type shoes 92 that are pressed down into engagement with the wheels 18 of the castors. The

Art Unit: 3673

difference is in the operating means for moving the brake bar, in the Hanson reference the brake bar has a cam follower in the form of roller 80 attached to the brake bar by a vertical shaft 88. A cam surface with recesses 81, 82, 83 is formed upon a slider 79 which can be pushed or pulled transversely by the above said links 86, 87. A spring loaded plate 78 presses the slider 79 into engagement with the roller 80, with the height of the brake bar and engagement of the rings 92 being decided by the position of the roller within the recesses 81-83. The slider 79 is not pivoted to the brake bar but is instead attached to the operating linkage, nor is the cam follower or roller 80 mounted to the wheeled carriage but is instead attached to the brake bar by means of the above said vertical shaft.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stryker, Pioth, Brooke et al, Rudolf et al, Lewandowski et al, Aulik, and Heiligenthal et al show castor braking mechanisms used upon wheeled carriages which are of particular interest.
